## I. INTRODUCTION

Nowadays a lot of IT professionals are working in multiple task and various kind of devices monitoring environment. Therefore, they are facing lot of difficulties, because they must access different types of web consoles and softwires to monitor all the servers, routers and switches one by one. Because of that IT Professionals waste their valuable time login to several systems to configure and monitor these things. Also, the company's require lot of manpower to accomplish the above task and to train them

In the market, there are lots of product that offer system monitoring like manage engine. But there are not any configuration tools that combined with the monitoring system. Users have to logon direct into the systems to do any changes or configure.
